EDUCATION

Indian Institute of Technology, Kharagpur (IIT Kharagpur)

Dual Degree (B.Tech + M.Tech) in Civil Engineering

2019 - 2024

8.16/10 CGPA

EXPERIENCE

Lambdatest — Member of Technical Staff | C++, Go, Python, AWS Lambda, Microservices

April 2024 – Present

- Engineered and developed a high-performance Visual Engine using **C++ with OOPs**, Python, AWS Lambda, Docker, enabling multiple image comparisons using unique **smart-comparison algorithms**, boosting product revenue by **20%**.
- Developed a unique layout comparison algorithm that renders differences in images. Integrated it across microservices in **Go, JS, and Python** using **Kafka, AWS Lambda** to enhance the comparisons' experience.
- Engineered and developed a **robust scheduler microservice** to manage and schedule web scans using cron jobs efficiently, integrating with MySQL and Kafka for **event-driven communication**.
- Built CRUD APIs in Go microservices to support comparison techniques, resolved multiple customer issues, addressed **race conditions**, and **optimized SQL queries** to improve performance by **40%**.
- Engineered a **multi-baseline screenshot comparison** subsystem — designed the variation schema, **Redis-coordinated** parallel fan-out via **Go goroutines**, and deterministic best-match resolution wired through dashboard and public APIs.
- Added **network logs** support in **KaneAI** real-device sessions by integrating a **MITM proxy binary** into the **HyperExecute VM** flow, capturing full HTTP traffic to power AI-driven test authoring and customer debugging.

TCG Digital

SDE Intern

May 2023 – Jul 2023

Kolkata, India

- Built a web app that generates **source code and Dockerfiles** for CRUD applications from user-supplied specs using **React, Node.js, PostgreSQL**.
- Added **CSV-driven seeding** so generated apps boot pre-populated with user data.

PROJECTS

AgentCI — CI/CD & Eval Platform for AI Agents | Python, FastAPI, Kafka, ClickHouse, Postgres, MCP | Github July 2026 – Present

- Building a **regression-testing and eval pipeline for AI agents**: versioned eval suites fan out across a model × parameter matrix, scored by a **batched two-stage LLM-as-judge**, with baseline diffs, **flakiness scoring** across repeated runs, and a pass/warn/fail **CI gate**.
- Designed the distributed backbone — **FastAPI control plane** (REST, WebSocket, **MCP server**), **Kafka** runner/judge workers with DLQ, **Postgres OLTP** + **ClickHouse** analytics — with per-provider **rate limiting** and per-run **cost budgets**.

Fivo — Voice-First Finance Agent | Python, FastAPI, Postgres (pgvector), Redis, Celery, Docker | Github

May 2026 – Present

- Built the backend for a voice-first personal-finance product: **async FastAPI + SQLAlchemy 2** layered architecture with JWT auth, Alembic migrations, **Redis, Celery workers, MinIO/S3**, fully Dockerized.
- Developed a **tool-calling voice agent** (typed tool registry/catalog, structured response envelope) that executes account, transaction, and budget operations from speech, backed by a **RAG pipeline** — **Voyage AI embeddings** indexed and retrieved via **pgvector**.

Resume Ranking with LLMs | Django, LangChain, LlamaIndex, Next.js, Tailwind | Github | Demo

December 2023

- Built a full-stack app that ranks resumes against a job description using a **LangChain + LlamaIndex** relevance engine.

COMPETITIONS / ACHIEVEMENTS

- Received a maximum rating of **2140** (top 1.46%) on **LeetCode**, 1812 on CodeChef, 1529 on Codeforces (*handle: bhatte*).
- Secured a global rank of **865** and **1440** in the **Google Kick Start** Round H and Round B 2022 respectively.
- Achieved a global rank of **1531** in **Meta Hacker Cup** Round 2 — T-shirt awarded to top 2000 participants.

HONORS / AWARDS

Inter-IIT Tech Meet 10.0 — Mercari Large-Scale System Design Hackathon

March 2022

- Won **Gold** for proposing a scalable cloud-native microservices architecture for a Healthcare Management System.

Website Hackathon — IIT Kharagpur

April 2022

- Won **Best Feature Prize** for a Notifications system built with Node.js / Express, among 30+ teams.

SKILLS

- **Languages:** Go, C++, Python, JavaScript/TypeScript, SQL
- **Backend & Infra:** Microservices, REST, gRPC, Kafka, Redis, MySQL, PostgreSQL, AWS (Lambda, S3), Docker, Kubernetes
- **AI / ML:** LLM agents & tool calling, RAG pipelines, LLM-as-judge evals, MCP, LangChain, LlamaIndex, OpenAI / Anthropic APIs

OPEN SOURCE CONTRIBUTIONS

- Mentored 10+ **KOSS** students in 2021 & 2022, fostering growth through projects like Mumble and letsUpsolve.
- Contributed to **Rocket.Chat** — addressed issues and submitted PRs.
